

KettleMate – Hexagonal Water Generating Pendant

* Kettle not included

HKE KettleMate Hexagonal Water Generating Pendant is a hexagonal water generator specially designed for Kettle. The user only needs to put the pendant into the filter holes of the stainless steel kettle and boil it together with clean water. The boiled hot water becomes Hexagonal Water, also known as Structured Water, and in Europe, even called Revitalized Water.

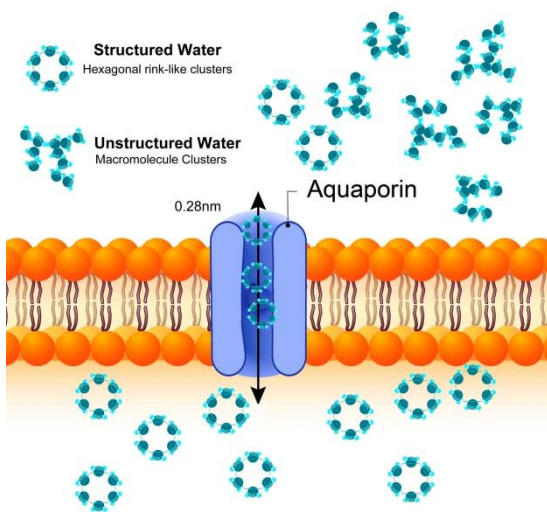

Currently, most functional beverages on the market are sold in plastic bottles, which do not contribute to the reduction of carbon emissions and are not economical. The hexagonal water generation pendant innovatively developed by the HKE R&D team is suitable for most stainless steel kettles with filter holes, and can quickly generate hexagonal water at home (the water's NMR half-width is less than 70Hz, detected by nuclear magnetic resonance equipment, is better than that of longevity villages around the world. The NMR half-width average data of longevity village water is 90Hz), and has the following superior characteristics:

Low Isobaric Pressure (High Penetration)

The human cell membrane is very tight and protective. For water to freely shuttle through the cell membrane, the isobaric pressure must be lower than that of the cell membrane, so that it can help transport nutrients and eliminate waste and toxins.

Strong Kinetic Energy

It can quickly reach the nucleus through the cell membrane and help the information transfer and communicate within cells. It can also promote cell activation and proliferation, and accelerate metabolism.

High Dissolved Oxygen

The physically dissolved oxygen is 5-8ppm/molecular group, which can be regarded as the real high dissolved oxygen small molecule water. It can keep the body in a high dissolved oxygen state so that anaerobic bacteria and anaerobic viruses cannot be retained. At the same time, it can also soften blood vessels and improve the body's immunity.

With the above-mentioned superior characteristics, the hexagonal water generated by the pendant can quickly penetrate the cell membrane, and then transmit information into the cell nucleus through electrons, which promotes cell activation and proliferation and accelerates metabolism. Especially for people with constipation, high uric acid levels, and gout, their condition can be effectively improved. After boiling, the hexagonal water will continue to resonate in the stainless steel kettle and maintain its long-lasting effect. It will not be restored by leaving the kettle, and it has been proved by experiments that it can be maintained for more than 72 hours.

Why Hexagonal Water is Important to Health

Water is what we depend on for every bodily function and ultimately for survival. When a baby is born, water in its body cells is a hexagonal ring-like cluster, also called structured water or small molecule cluster water. This is why the baby's skin is tender and full of vigor.

As one grows older, the human body begins to lose hexagonal structured water or in its cells and DNA. At the age of 58, only 23% of the water in the body is structured water. The loss of hexagonal structured water will affect the body's metabolism, skin complexion and circulation, healthy immune system, and detoxification. More and more harmful substance accumulates in the body and one becomes aging and even gets a disease.

"Aging is a loss of Hexagonal Water from organs, tissues and cells, and an overall decrease in total body water. Replenishing the Hexagonal Water in our bodies can increase vitality, slow the aging process, and prevent disease". Jhon, M.S., The Water Puzzle and the Hexagonal Key

If water can retain the memory of pollutants, and the memory can survive the filtration and chlorine treatment of the water plant, then we may provide our body cells with a lot of bad information. In 1991, the physicist Dr. Wolfgang Ludwig (Wolfgang Ludwig) proved that water has memory. It can store frequency, and transmit coherent information to organisms.

The Scientific Principles of the Hexagonal Water Generating Pendant

The physical structure of the hexagonal water generating pendant is made of pure steel (316L medical grade), and the two pendants are filled with high-level energy liquid.

The energy fluid made of rare materials and ore contains two basic elements: protons and electrons. The energy of the proton comes from the far-infrared radiation rate of the sun, and the electron is affected by the gravitational force of the earth's rotating magnetic field, so the spontaneous rotation generates kinetic energy (resonance). Under the action of this resonance, water induces the hydrogen bond between water molecules to break the bond, and also destroys the Van der Waals Force, thereby maintaining the water

molecule cluster in a small state for a long time.

The Excellent Characteristics of the Hexagonal Water Generating Pendant

Physical

The hexagonal water generating pendant is completely used to produce excellent performance based on the principle of physical science resonance, no other consumable costs, and has a long half-life (guaranteed for more than 10 years of validity).

Safety

Made of 316L pure steel with high-temperature resistance up to 1850°C and low-temperature resistance up to -800°C. The product is resistant to corrosion, strong acid, and alkali. Non-toxic, non-hazardous, non-radioactive, non-electromagnetic, non-spontaneous combustion, non-spontaneous explosion are guaranteed.

Persistence

The fluid inside the two energy rods is derived from the solar far-infrared emissivity and the gravitational force of the Earth's rotational magnetic field, so the spontaneous rotation generates high-order kinetic energy of constant motion.

Efficacy

Long-term consumption of hexagonal water can promote the body's metabolic functions, effectively eliminate wastes from the body, enhance the activation of cells and strengthen the immune system.

Premium-feature version

The HKE R&D team has developed an innovative standard hexagonal water generating pendant and a premium-feature version – one extra portable energy stirring stick in addition to the two energy pendants. This product is not only used to create small molecule water but also can be used to stir spicy, bitter, sour natural liquid beverages (such as liquor, whiskey, brandy, lime, vodka, etc.) to make them smooth and easy to drink. Moreover, it can reduce the molecular size of natural

beverages to achieve easy absorption and metabolism.

Usage

Insert the two hooks (1.8~2.2cm distance between hooks) of the hexagonal water generating pendant into two of the filter holes inside the kettle, adjust the distance between the filter hole and the hooks, and insert them into the holes. When the water is boiled with clean water in a stainless steel kettle, the boiled water becomes hexagonal water, also known as structured water. After repeated tests, stainless steel resonates best, and the boiled hexagonal water will continue to

resonate in the stainless steel kettle. You can pour the water treated by HKE hexagonal water pendant in stainless steel insulated water bottle.

If you use the premium-feature version of the hexagonal water generating pendant, the portable energy stirrer can be used as a liquor or wine maturation accelerator. Just put stirrer into the spirits glass and stir whiskey or liquor few seconds. Then put stick in glass around 5 seconds if only for sober up. If aging whiskey, you can extend the time of putting stirrer in the glass 10 ~ 20 seconds according to personal preference. The effect of HKE physical

resonance can crack the macromolecules in the whisky, soften the wine line, release the aroma, round the taste, and produce more flavors. However, the taste of spirits or liquor will be difficult to drink if there are some unnatural additives in spirits after using HKE Portable Spirits Accelerated Aging stick. **(Champagne, Beer and sparkling drinks are not suitable)**

Mechanical Specification

Material	316L Stainless steel, Medical grade	
Hooks spacing	1.8 ~ 2.2 cm	
Standard Size/ Weight (N.W.)	12 (L) x 2.5 (W) x 1.4 (D) cm; / 65g	
Premium Size/ Weight (N.W.)	12 (L) x 2.5 (W) x 2.0 (D) cm; Portable energy stirrer 13.2 cm / 107g	
Half-life Period	10 years	
SGS Non-Radioactive Contamination Test	Compliant with Non-Radioactive Contamination at International level (Report # KK-22-1111)	
Cleaning Method	It is recommended to wash with clean water after use and then wipe with a clean dry cloth
